Planning application: Harrow School – New Schools new flues. Refs: P/4065/18 (Listed Building Application) and P/3993/18 (Planning)

Dear Tendai Mutasa

The Harrow Hill Trust Planning Committee has considered this application. This is an important building framing one of the few publicly accessible – and therefore important - gaps to the view of London from the Hill. It impacts on the listed Chapel adjacent.

The two boiler flues are incongruous and intrusive. They are of very different appearance to a traditional cast iron rain water pipe. They have no joints, no collars and are fixed on unsightly projecting brackets.

The solution is not appropriate to the building or the view through the gap. An alternative solution is needed, and these applications should be refused.

Kind regards,

Dr Simon Less
